Pilar Gonzalez Ruiz, Kristin De Meyer, Ann Witvrouw

Poly-SiGe for MEMS-above-CMOS Sensors: 44 (Springer Series in Advanced Microelectronics) Pilar Gonzalez Ruiz, Kristin De Meyer, Ann Witvrouw

Polycrystalline SiGe has emerged as a promising MEMS (Microelectromechanical Systems) structural material since it provides the desired mechanical properties at lower temperatures compared to poly-Si, allowing the direct post-processing on top of CMOS. This CMOS-MEMS monolithic integration can lead to more compact MEMS with improved performance. The potential of poly-SiGe for MEMS above-aluminum-backend CMOS integration has already been demonstrated. However, aggressive interconnect scaling has led to the replacement of the traditional aluminum metallization by copper (Cu) metallization, due to its lower resistivity and improved reliability.

Poly-SiGe for MEMS-above-CMOS sensors demonstrates the compatibility of poly-SiGe with post-processing above the advanced CMOS technology nodes through the successful fabrication of an integrated poly-SiGe piezoresistive pressure sensor, directly fabricated above 0.13 μm Cu-backend CMOS. Furthermore, this book presents the first detailed investigation on the influence of deposition conditions, germanium content and doping concentration on the electrical and piezoresistive properties of boron-doped poly-SiGe. The development of a CMOS-compatible process flow, with special attention to the sealing method, is also described. Piezoresistive pressure sensors with different areas and piezoresistor designs were fabricated and tested. Together with the piezoresistive pressure sensors, also functional capacitive pressure sensors were successfully fabricated on the same wafer, proving the versatility of poly-SiGe for MEMS sensor applications. Finally, a detailed analysis of the MEMS processing impact on the underlying CMOS circuit is also presented.

From reader reviews:

Antonio Haynie:

The book Poly-SiGe for MEMS-above-CMOS Sensors: 44 (Springer Series in Advanced Microelectronics) make you feel enjoy for your spare time. You may use to make your capable more increase. Book can to be your best friend when you getting stress or having big problem along with your subject. If you can make reading a book Poly-SiGe for MEMS-above-CMOS Sensors: 44 (Springer Series in Advanced Microelectronics) for being your habit, you can get considerably more advantages, like add your capable, increase your knowledge about a number of or all subjects. It is possible to know everything if you like wide open and read a publication Poly-SiGe for MEMS-above-CMOS Sensors: 44 (Springer Series in Advanced Microelectronics). Kinds of book are several. It means that, science e-book or encyclopedia or other people. So , how do you think about this e-book?

Melanie Archer:

Reading can called mind hangout, why? Because while you are reading a book specially book entitled Poly-SiGe for MEMS-above-CMOS Sensors: 44 (Springer Series in Advanced Microelectronics) the mind will drift away trough every dimension, wandering in each and every aspect that maybe not known for but surely will end up your mind friends. Imaging every word written in a e-book then become one web form conclusion and explanation that will maybe you never get just before. The Poly-SiGe for MEMS-above-CMOS Sensors: 44 (Springer Series in Advanced Microelectronics) giving you another experience more than blown away your head but also giving you useful details for your better life within this era. So now let us demonstrate the relaxing pattern this is your body and mind are going to be pleased when you are finished reading it, like winning a game. Do you want to try this extraordinary shelling out spare time activity?

Isaias McGee:

That publication can make you to feel relax. This particular book Poly-SiGe for MEMS-above-CMOS Sensors: 44 (Springer Series in Advanced Microelectronics) was multi-colored and of course has pictures on the website. As we know that book Poly-SiGe for MEMS-above-CMOS Sensors: 44 (Springer Series in Advanced Microelectronics) has many kinds or type. Start from kids until adolescents. For example Naruto or Detective Conan you can read and think that you are the character on there. So , not at all of book are make you bored, any it makes you feel happy, fun and chill out. Try to choose the best book for you personally and try to like reading that.

Richard Zhang:

What is your hobby? Have you heard this question when you got college students? We believe that that concern was given by teacher on their students. Many kinds of hobby, Every individual has different hobby. And you know that little person such as reading or as reading through become their hobby. You need to know that reading is very important along with book as to be the issue. Book is important thing to

incorporate your knowledge, except your own personal teacher or lecturer. You get good news or update regarding something by book. A substantial number of sorts of books that can you choose to adopt be your object. One of them is niagra Poly-SiGe for MEMS-above-CMOS Sensors: 44 (Springer Series in Advanced Microelectronics).
