Generalized Linear Models for Insurance Data (International Series on Actuarial Science) PIET DE JONG, GILLIAN Z. HELLER
This is the only book actuaries need to understand generalized linear models (GLMs) for insurance applications. GLMs are used in the insurance industry to support critical decisions. Until now, no text has introduced GLMs in this context or addressed the problems specific to insurance data. Using insurance data sets, this practical, rigorous book treats GLMs, covers all standard exponential family distributions, extends the methodology to correlated data structures, and discusses recent developments which go beyond the GLM. The issues in the book are specific to insurance data, such as model selection in the presence of large data sets and the handling of varying exposure times. Exercises and data-based practicals help readers to consolidate their skills, with solutions and data sets given on the companion website. Although the book is package-independent, SAS code and output examples feature in an appendix and on the website. In addition, R code and output for all the examples are provided on the website.

From reader reviews:

Corey Ison:

What do you with regards to book? It is not important together with you? Or just adding material when you want something to explain what your own problem? How about your time? Or are you busy person? If you don't have spare time to try and do others business, it is make you feel bored faster. And you have spare time? What did you do? All people has many questions above. They should answer that question simply because just their can do this. It said that about reserve. Book is familiar on every person. Yes, it is correct. Because start from on jardín de infancia until university need this particular Generalized Linear Models for Insurance Data (International Series on Actuarial Science) to read.

Tony Hill:

Playing with family in a park, coming to see the water world or hanging out with friends is thing that usually you have done when you have spare time, then why you don't try point that really opposite from that. A single activity that make you not experience tired but still relaxing, trilling like on roller coaster you have been ride on and with addition info. Even you love Generalized Linear Models for Insurance Data (International Series on Actuarial Science), it is possible to enjoy both. It is very good combination right, you still wish to miss it? What kind of hang-out type is it? Oh can occur its mind hangout guys. What? Still don't have it, oh come on its named reading friends.

Patsy Hall:

Does one one of the book lovers? If yes, do you ever feeling doubt when you are in the book store? Try and pick one book that you just dont know the inside because don't assess book by its deal with may doesn't work is difficult job because you are frightened that the inside maybe not seeing that fantastic as in the outside appearance likes. Maybe you answer may be Generalized Linear Models for Insurance Data (International Series on Actuarial Science) why because the fantastic cover that make you consider with regards to the content will not disappoint you actually. The inside or content is actually fantastic as the outside or maybe cover. Your reading sixth sense will directly guide you to pick up this book.

Ernest Bryan:

This Generalized Linear Models for Insurance Data (International Series on Actuarial Science) is great book for you because the content which can be full of information for you who also always deal with world and still have to make decision every minute. This kind of book reveal it data accurately using great organize word or we can declare no rambling sentences inside it. So if you are read the idea hurriedly you can have whole facts in it. Doesn't mean it only offers you straight forward sentences but challenging core information with attractive delivering sentences. Having Generalized Linear Models for Insurance Data (International Series on Actuarial Science) in your hand like keeping the world in your arm, information in it is not ridiculous a single. We can say that no e-book that offer you world throughout ten or fifteen minute right but

this guide already do that. So , this can be good reading book. Hello Mr. and Mrs. hectic do you still doubt that will?
