Handbook of Academic Learning: Construction of Knowledge (Educational Psychology) Gary D. Phye

The **Handbook of Academic Learning** provides a comprehensive resource for educational and cognitive psychologists, as well as educators themselves, on the mechanisms and processes of academic learning. Beginning with general themes that cross subject and age levels, the book discusses what motivates students to learn and how knowledge can be made personal for better learning and remembering. Individual chapters identify proven effective teaching methods for the specific domains of math, reading, writing, science, and critical problem solving; how students learn within those domains; and how learning can be accurately assessed for given domains and age levels.

The **Handbook** takes a constructivist perspective to academic learning, emphasizing the construction of personal knowledge of an academic nature. Constructivism within the context of learning theory is viewed as involving an active learner that constructs an academic knowledge base through the development of cognitive strategies and metacognition. The book discusses the development of basic literacy skills that provide the foundation for higher order thinking and problem solving. Constructivism recognizes the social dimension of classroom learning and emphasizes the motivational elements of self-regulation and volition as essential learner characteristics.

Written by authors who have experience with both theory development and the development of classroom instructional techniques, the **Handbook** empowers educators to develop, implement, and field-test instructional practices at their school site. The book provides a review of the literature, theory, research, and skill techniques for effective teaching and learning.
