P. G. Drazin, N. Riley

The Navier-Stokes Equations: A Classification of Flows and Exact Solutions (London Mathematical Society Lecture Note Series) P. G. Drazin, N. Riley

The Navier-Stokes equations were firmly established in the 19th Century as the system of nonlinear partial differential equations which describe the motion of most commonly occurring fluids in air and water, and since that time exact solutions have been sought by scientists. Collectively these solutions allow a clear insight into the behavior of fluids, providing a vehicle for novel mathematical methods and a useful check for computations in fluid dynamics, a field in which theoretical research is now dominated by computational methods. This 2006 book draws together exact solutions from widely differing sources and presents them in a coherent manner, in part by classifying solutions via their temporal and geometric constraints. It will prove to be a valuable resource to all who have an interest in the subject of fluid mechanics, and in particular to those who are learning or teaching the subject at the senior undergraduate and graduate levels.

From reader reviews:

Jessica Ball:

Do you have favorite book? Should you have, what is your favorite's book? Guide is very important thing for us to be aware of everything in the world. Each guide has different aim as well as goal; it means that e-book has different type. Some people feel enjoy to spend their a chance to read a book. They may be reading whatever they have because their hobby is usually reading a book. Think about the person who don't like studying a book? Sometime, individual feel need book when they found difficult problem as well as exercise. Well, probably you will want this The Navier-Stokes Equations: A Classification of Flows and Exact Solutions (London Mathematical Society Lecture Note Series).

Jennifer Garrison:

Spent a free time to be fun activity to do! A lot of people spent their free time with their family, or their particular friends. Usually they doing activity like watching television, gonna beach, or picnic within the park. They actually doing same every week. Do you feel it? Do you want to something different to fill your own personal free time/ holiday? Might be reading a book is usually option to fill your free of charge time/ holiday. The first thing that you ask may be what kinds of e-book that you should read. If you want to try out look for book, may be the reserve untitled The Navier-Stokes Equations: A Classification of Flows and Exact Solutions (London Mathematical Society Lecture Note Series) can be fine book to read. May be it might be best activity to you.

Tammy Jones:

Often the book The Navier-Stokes Equations: A Classification of Flows and Exact Solutions (London Mathematical Society Lecture Note Series) has a lot of information on it. So when you read this book you can get a lot of advantage. The book was compiled by the very famous author. This articles author makes some research previous to write this book. That book very easy to read you will get the point easily after perusing this book.

Raymond Jackson:

As we know that book is essential thing to add our know-how for everything. By a publication we can know everything we would like. A book is a range of written, printed, illustrated or maybe blank sheet. Every year has been exactly added. This publication The Navier-Stokes Equations: A Classification of Flows and Exact Solutions (London Mathematical Society Lecture Note Series) was filled about science. Spend your free time to add your knowledge about your technology competence. Some people has various feel when they reading a new book. If you know how big good thing about a book, you can sense enjoy to read a publication. In the modern era like now, many ways to get book which you wanted.
