Under new editorial direction, **Advances in Agronomy** both continues its long tradition and expands to include innovative methods and technologies. Leading international scientists cover topics in plant and soil sciences, biotechnology, terrestrial ecosystems, and environmental concerns. This volume presents three articles devoted to plant productivity and improvement and three articles devoted to advances in soil science. This and future volumes will be of interest to agronomists in academe, industry, and government. The field of agronomy has changed greatly since the publication of the first volume of **Advances in Agronomy** in 1949. Many innovations and advances have occurred, yet many challenges remain.

Key Features

- * Influence of soil structure and physical properties on environmental quality
- * Application of nuclear magnetic resonance spectroscopy to soil chemistry
- * Use of low-lignin mutants for improving forage quality
- * Application of DNA markers and genetic strategies to plant improvement
