Juan G. Roederer, Hui Zhang

Dynamics of Magnetically Trapped Particles: Foundations of the Physics of Radiation Belts and Space Plasmas: 403 (Astrophysics and Space Science Library) Juan G. Roederer, Hui Zhang

This book is a new edition of Roederer's classic *Dynamics of Geomagnetically Trapped Radiation*, updated and considerably expanded. The main objective is to describe the dynamic properties of magnetically trapped particles in planetary radiation belts and plasmas and explain the physical processes involved from the theoretical point of view. The approach is to examine in detail the orbital and adiabatic motion of individual particles in typical configurations of magnetic and electric fields in the magnetosphere and, from there, derive basic features of the particles' collective "macroscopic" behavior in general planetary environments. Emphasis is not on the "what" but on the "why" of particle phenomena in near-earth space, providing a solid and clear understanding of the principal basic physical mechanisms and dynamic processes involved. The book will also serve as an introduction to general space plasma physics, with abundant basic examples to illustrate and explain the physical origin of different types of plasma current systems and their self-organizing character via the magnetic field. The ultimate aim is to help both graduate students and interested scientists to successfully face the theoretical and experimental challenges lying ahead in space physics in view of recent and upcoming satellite missions and an expected wealth of data on radiation belts and plasmas.

From reader reviews:

Aaron Jack:

What do you about book? It is not important together with you? Or just adding material when you require something to explain what you problem? How about your time? Or are you busy particular person? If you don't have spare time to complete others business, it is make you feel bored faster. And you have free time? What did you do? Every person has many questions above. They must answer that question simply because just their can do that. It said that about publication. Book is familiar on every person. Yes, it is proper. Because start from on pre-school until university need that Dynamics of Magnetically Trapped Particles: Foundations of the Physics of Radiation Belts and Space Plasmas: 403 (Astrophysics and Space Science Library) to read.

Tammy Campbell:

Do you one among people who can't read satisfying if the sentence chained in the straightway, hold on guys this aren't like that. This Dynamics of Magnetically Trapped Particles: Foundations of the Physics of Radiation Belts and Space Plasmas: 403 (Astrophysics and Space Science Library) book is readable by simply you who hate those straight word style. You will find the information here are arrange for enjoyable looking at experience without leaving even decrease the knowledge that want to offer to you. The writer involving Dynamics of Magnetically Trapped Particles: Foundations of the Physics of Radiation Belts and Space Plasmas: 403 (Astrophysics and Space Science Library) content conveys the idea easily to understand by most people. The printed and e-book are not different in the content material but it just different as it. So , do you continue to thinking Dynamics of Magnetically Trapped Particles: Foundations of the Physics of Radiation Belts and Space Plasmas: 403 (Astrophysics and Space Science Library) is not loveable to be your top listing reading book?

Marcia Marshall:

This book untitled Dynamics of Magnetically Trapped Particles: Foundations of the Physics of Radiation Belts and Space Plasmas: 403 (Astrophysics and Space Science Library) to be one of several books this best seller in this year, that is because when you read this guide you can get a lot of benefit in it. You will easily to buy this particular book in the book retail outlet or you can order it by using online. The publisher in this book sells the e-book too. It makes you quickly to read this book, since you can read this book in your Smart phone. So there is no reason for your requirements to past this e-book from your list.

Johnny Abel:

Some people said that they feel fed up when they reading a guide. They are directly felt this when they get a half areas of the book. You can choose often the book Dynamics of Magnetically Trapped Particles: Foundations of the Physics of Radiation Belts and Space Plasmas: 403 (Astrophysics and Space Science

Library) to make your current reading is interesting. Your current skill of reading ability is developing when you including reading. Try to choose easy book to make you enjoy to study it and mingle the sensation about book and studying especially. It is to be first opinion for you to like to start a book and go through it. Beside that the reserve Dynamics of Magnetically Trapped Particles: Foundations of the Physics of Radiation Belts and Space Plasmas: 403 (Astrophysics and Space Science Library) can to be your brand new friend when you're sense alone and confuse in doing what must you're doing of that time.
