Autonomous Learning Systems: From Data Streams to Knowledge in Real-time Plamen Angelov

Autonomous Learning Systems is the result of over a decade of focused research and studies in this emerging area which spans a number of well-known and well-established disciplines that include machine learning, system identification, data mining, fuzzy logic, neural networks, neuro-fuzzy systems, control theory and pattern recognition. The evolution of these systems has been both industry-driven with an increasing demand from sectors such as defence and security, aerospace and advanced process industries, bio-medicine and intelligent transportation, as well as research-driven – there is a strong trend of innovation of all of the above well-established research disciplines that is linked to their on-line and real-time application; their adaptability and flexibility.

Providing an introduction to the key technologies, detailed technical explanations of the methodology, and an illustration of the practical relevance of the approach with a wide range of applications, this book addresses the challenges of autonomous learning systems with a systematic approach that lays the foundations for a fast growing area of research that will underpin a range of technological applications vital to both industry and society.

Key features:

- Presents the subject systematically from explaining the fundamentals to illustrating the proposed approach with numerous applications.
- Covers a wide range of applications in fields including unmanned vehicles/robotics, oil refineries, chemical industry, evolving user behaviour and activity recognition.
- Reviews traditional fields including clustering, classification, control, fault detection and anomaly detection, filtering and estimation through the prism of evolving and autonomously learning mechanisms.
- Accompanied by a website hosting additional material, including the software toolbox and lecture notes.

Autonomous Learning Systems provides a ‘one-stop shop’ on the subject for academics, students, researchers and practicing engineers. It is also a valuable reference for Government agencies and software developers.

From reader reviews:

Robert Prather:

What do you ponder on book? It is just for students because they are still students or the item for all people in the world, the particular best subject for that? Just simply you can be answered for that concern above. Every person has diverse personality and hobby for every single other. Don't to be pressured someone or something that they don't wish do that. You must know how great as well as important the book Autonomous Learning Systems: From Data Streams to Knowledge in Real-time. All type of book are you able to see on many sources. You can look for the internet sources or other social media.

Jeanne Gonzales:

Do you have something that you like such as book? The book lovers usually prefer to select book like comic, limited story and the biggest one is novel. Now, why not trying Autonomous Learning Systems: From Data Streams to Knowledge in Real-time that give your pleasure preference will be satisfied through reading this book. Reading addiction all over the world can be said as the method for people to know world far better than how they react toward the world. It can't be mentioned constantly that reading behavior only for the geeky man but for all of you who wants to always be success person. So , for every you who want to start reading as your good habit, you can pick Autonomous Learning Systems: From Data Streams to Knowledge in Real-time become your own starter.

Raymond McMillion:

As we know that book is essential thing to add our information for everything. By a e-book we can know everything we really wish for. A book is a range of written, printed, illustrated or blank sheet. Every year has been exactly added. This book Autonomous Learning Systems: From Data Streams to Knowledge in Real-time was filled about science. Spend your spare time to add your knowledge about your science competence. Some people has different feel when they reading a book. If you know how big good thing about a book, you can truly feel enjoy to read a e-book. In the modern era like right now, many ways to get book that you just wanted.

Patrick Bergeron:

What is your hobby? Have you heard which question when you got students? We believe that that issue was given by teacher to the students. Many kinds of hobby, Every individual has different hobby. And you also know that little person like reading or as reading through become their hobby. You have to know that reading is very important and book as to be the factor. Book is important thing to incorporate you knowledge, except your own teacher or lecturer. You find good news or update regarding something by book. Many kinds of books that can you go onto be your object. One of them is actually Autonomous Learning Systems: From Data Streams to Knowledge in Real-time.
