Dressed Photons: Concepts of Light-Matter Fusion Technology (Nano-Optics and Nanophotonics)

Motoichi Ohtsu

Authored by the developer of dressed photon science and technology as well as nanophotonics, this book outlines concepts of the subject using a novel theoretical framework that differs from conventional wave optics. It provides a quantum theoretical description of optical near fields and related problems that puts matter excitation such as electronic and vibrational ones on an equal footing with photons. By this description, optical near fields are interpreted as quasi-particles and named dressed photons which carry the material excitation energy in a nanometric space.

The author then explores novel nanophotonic devices, fabrications, and energy conversion based on the theoretical picture of dressed photons. Further, this book looks at how the assembly of nanophotonic devices produces information and communication systems.

Dressed photon science and technology is on its way to revolutionizing various applications in devices, fabrications, and systems. Promoting further exploration in the field, this book presents physically intuitive concepts, theories, and technical details for students, engineers, and scientists engaged in research and development in dressed photon science and technology as well as nanophotonics.

From reader reviews:

Agnes Henson:

The knowledge that you get from Dressed Photons: Concepts of Light-Matter Fusion Technology (Nano-Optics and Nanophotonics) may be the more deep you searching the information that hide within the words the more you get serious about reading it. It does not mean that this book is hard to understand but Dressed Photons: Concepts of Light-Matter Fusion Technology (Nano-Optics and Nanophotonics) giving you joy feeling of reading. The writer conveys their point in particular way that can be understood simply by anyone who read this because the author of this e-book is well-known enough. This specific book also makes your own vocabulary increase well. That makes it easy to understand then can go together with you, both in printed or e-book style are available. We suggest you for having that Dressed Photons: Concepts of Light-Matter Fusion Technology (Nano-Optics and Nanophotonics) instantly.

Eldon Hall:

This Dressed Photons: Concepts of Light-Matter Fusion Technology (Nano-Optics and Nanophotonics) are usually reliable for you who want to be considered a successful person, why. The explanation of this Dressed Photons: Concepts of Light-Matter Fusion Technology (Nano-Optics and Nanophotonics) can be one of the great books you must have will be giving you more than just simple reading food but feed you with information that might be will shock your earlier knowledge. This book will be handy, you can bring it almost everywhere and whenever your conditions in the e-book and printed versions. Beside that this Dressed Photons: Concepts of Light-Matter Fusion Technology (Nano-Optics and Nanophotonics) forcing you to have an enormous of experience such as rich vocabulary, giving you test of critical thinking that could it useful in your day activity. So , let's have it and enjoy reading.

Kathryn Botello:

Within this era which is the greater particular person or who has ability in doing something more are more treasured than other. Do you want to become among it? It is just simple approach to have that. What you need to do is just spending your time almost no but quite enough to enjoy a look at some books. One of the books in the top collection in your reading list will be Dressed Photons: Concepts of Light-Matter Fusion Technology (Nano-Optics and Nanophotonics). This book which is qualified as The Hungry Inclines can get you closer in growing to be precious person. By looking way up and review this e-book you can get many advantages.

Sandra Leggett:

As we know that book is very important thing to add our information for everything. By a e-book we can know everything we would like. A book is a range of written, printed, illustrated or maybe blank sheet. Every year had been exactly added. This guide Dressed Photons: Concepts of Light-Matter Fusion Technology (Nano-Optics and Nanophotonics) was filled about science. Spend your extra time to add your

knowledge about your scientific disciplines competence. Some people has several feel when they reading the book. If you know how big advantage of a book, you can experience enjoy to read a guide. In the modern era like at this point, many ways to get book that you just wanted.
